## 1 Summary

GD32103B-EVAL uses GD32F103VBT6 as the main controller. It uses Mini USB interface to supply 5V power. SWD, Reset, Boot, User button key, LED, CAN, I2C, USART, RTC, LCD, SPI, ADC, EXMC, USBD, GD-Link and Extension Pins are also included. For more details please refer to GD32103B-EVAL-V1.2 schematic.

## **2** Function Pin Assign

Table 1. Function pin assign

Function	Pin	Description
	PC6	LED2
	PC7	LED3
LED	PC8	LED4
	PC9	LED5
RESET		K1-Reset
	PA0	K2-Wakeup
KEY	PB9	K3-User key
	PC13	K4-Tamper
BEEP	PB8	BEEP_CTL
LICARTO	PA9	USART0_TX
USART0	PA10	USART0_RX
	PD5	USART1_TX
LICADT4	PD6	USART1_RX
USART1	PD3	USART1_CTS
	PD4	USART1_RTS
ADC	PC4	ADC01_IN14
12C	PB6	I2C0_SCL
	PB7	I2C0_SDA

	PD9	EXMC_D14
	PD10	EXMC_D15
	PE2	EXMC_A23
	PD4	EXMC_NOE
	PD5	EXMC_NWE
	PD7	EXMC_NE0
	PA11	USB_DM
USBD	PA12	USB_DP

## 3 Getting started

The EVAL board uses Mini USB connecter to get power DC +5V, which is the hardware system normal work voltage. A J-Link tool or GD-Link on board is necessary in order to download and debug programs. Select the correct boot mode and then power on, the LED1 will turn on, which indicates that the power supply is OK.

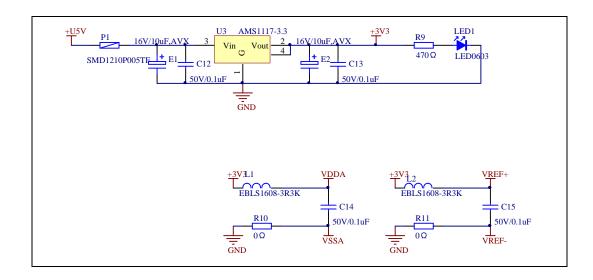

There are Keil version and IAR version of all projects. Keil version of the projects are created based on Keil MDK-ARM 4.74 uVision4. IAR version of the projects are created based on IAR Embedded Workbench for ARM 7.40.2. During use, the following points should be noted:

- 1. If you use Keil uVision4 to open the project, install the GD32F10x\_AddOn.2.0.0.exe to load the associated files.
- 2. If you use Keil uVision5 to open the project, there are two ways to solve the "Device Missing" (s)" problem. One is to install GigaDevice.GD32F10x\_DFP.2.0.1.pack. In Project menu, select the Manage sub menu, click on the "Version Migrate 5 Format..." menu, the Keil uVision4 project will be converted Keil uVision5 project. Then to "C:\Keil\_v5\ARM\Pack\ARM\CMSIS\4.2.0\CMSIS\Include" to C/C++ in Option for Target. The other is to install Addon directly. Select the installation directory of Keil uVision5 software, such as C:\Keil\_v5, in Destination Folder of Folder Selection. Select the corresponding device in Device of Option for Target and add "C:\Keil\_v5\ARM\Pack\ARM\CMSIS\4.2.0\CMSIS\Include" to C/C++ in Option for Target.
- 3. If you use IAR to open the project, install IAR\_GD32F10x\_ADDON.2.0.0.exe to load the associated files.

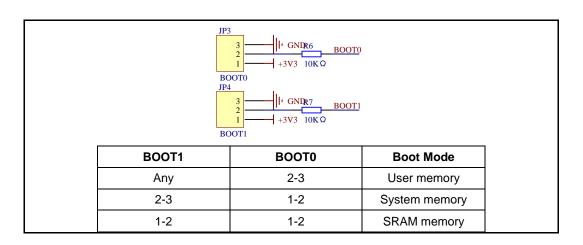

## 4 Hardware layout overview

### 4.1 Power

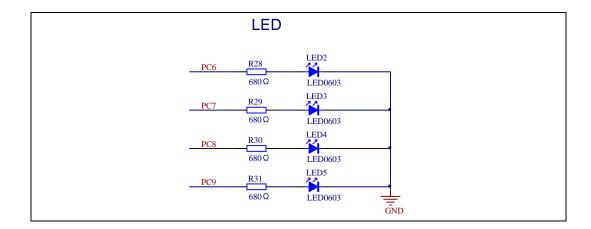

#### **4.2** Boot

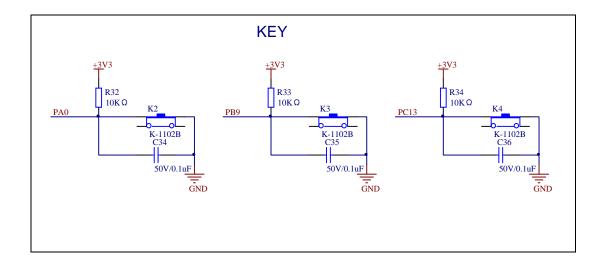

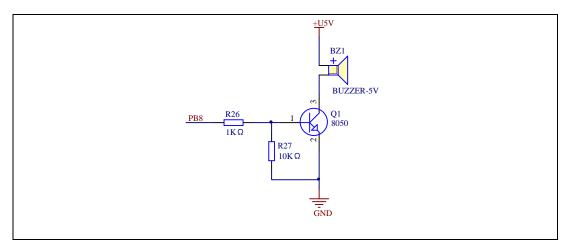

## 4.3 LED

#### 4.4 **KEY**

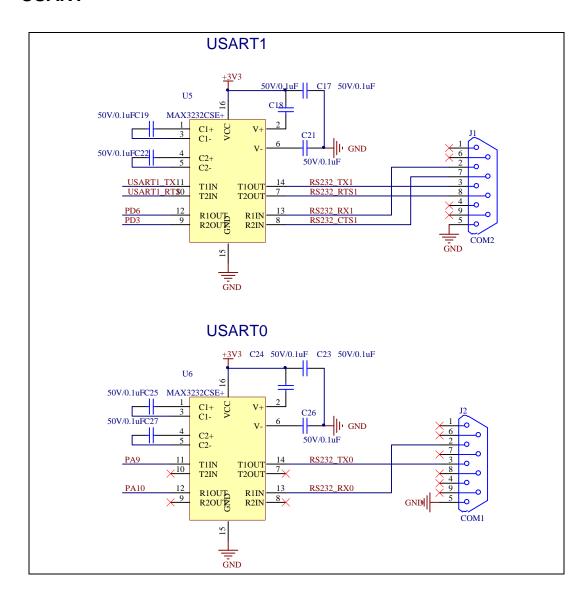

#### 4.5 BEEP

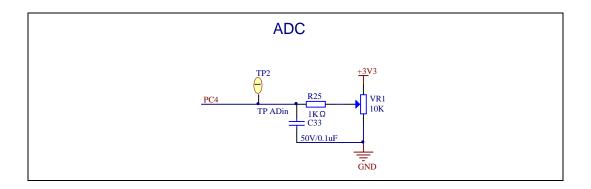

### 4.6 USART

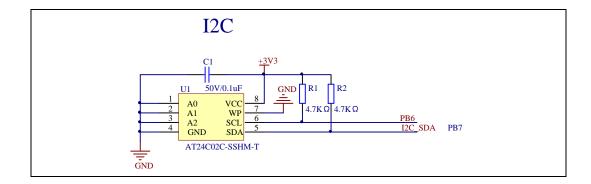

#### 4.7 ADC

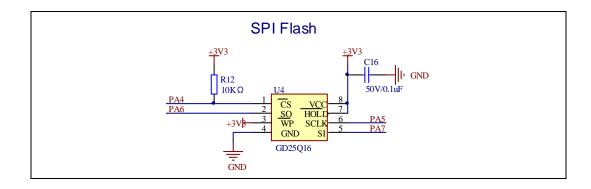

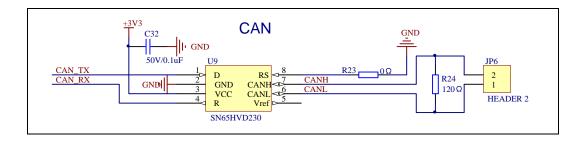

## 4.8 I2C

## 4.9 SPI

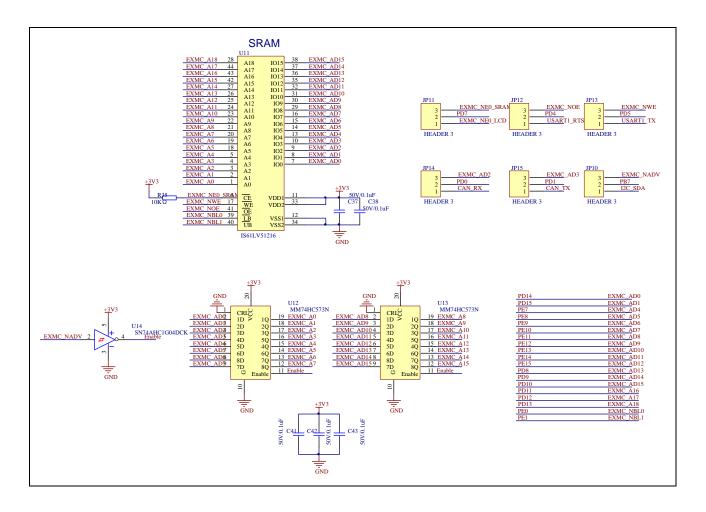

## 4.10 CAN

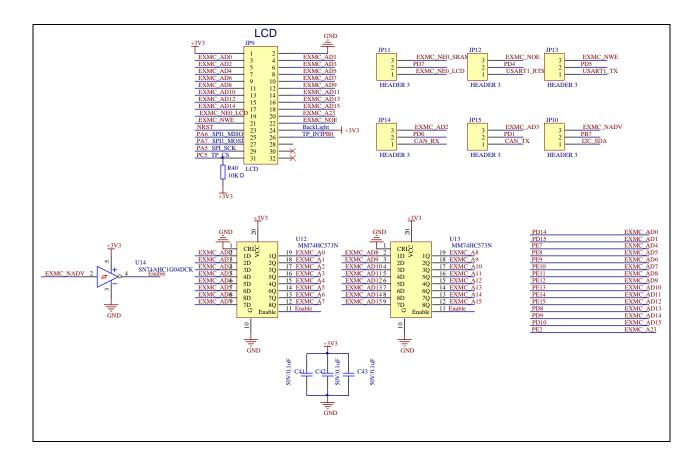

## 4.11 SRAM

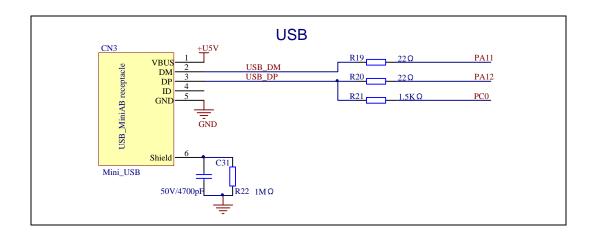

## 4.12 LCD

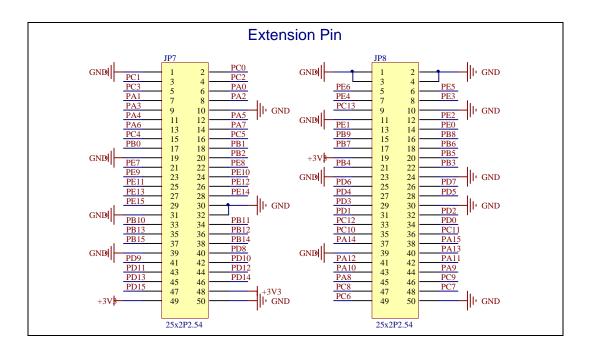

## 4.13 USBD

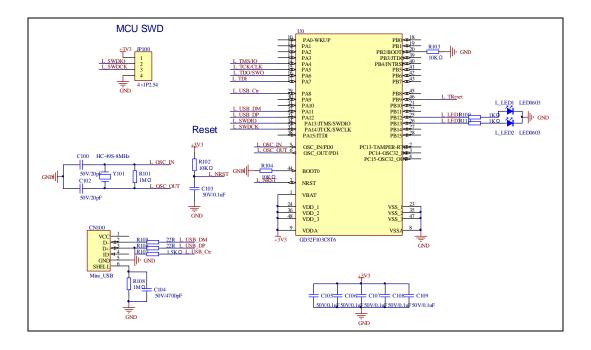

#### 4.14 Extension

#### 4.15 **GD-Link**

## 5 Routine use guide

### 5.1 GPIO\_Runing\_Led

#### 5.1.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use GPIO control the LED
- Learn to use SysTick to generate 1ms delay

GD32103B-EVAL board has four LEDs. The LED2, LED3, LED4 and LED5 are controlled by GPIO. This demo will show how to light the LEDs.

#### 5.1.2 DEMO Running Result

Download the program <01\_GPIO\_Runing\_Led> to the EVAL board, LED2, LED3, LED4, LED5 will turn on in sequence with interval of 200ms, and turn off together, 200ms later, repeat the process.

#### 5.2 **GPIO\_Key\_Polling\_mode**

#### 5.2.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use GPIO control the LED and the KEY
- Learn to use SysTick to generate 1ms delay

GD32103B-EVAL board has four keys and four LEDs. The four keys are Reset key, Tamper key, Wakeup key and User key. The LED2, LED3, LED4 and LED5 are controlled by GPIO.

This demo will show how to use the Tamper key to control the LED2. When press down the Tamper Key, it will check the input value of the IO port. If the value is 0 and will wait for 100ms. Check the input value of the IO port again. If the value still is 0, it indicates that the button is pressed successfully and toggle LED2.

## 5.2.2 DEMO Running Result

Download the program <02\_GPIO\_Key\_Polling\_mode> to the EVAL board, press down the Tamper Key, LED2 will be turned on. Press down the Tamper Key again, LED2 will be turned

off.

#### 5.3 EXTI\_Key\_Interrupt\_mode

#### 5.3.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use GPIO control the LED and the KEY
- Learn to use EXTI to generate external interrupt

GD32103B-EVAL board has four keys and four LEDs. The four keys are Reset key, Tamper key, Wakeup key and User key. The LED2, LED3, LED4 and LED5 are controlled by GPIO.

This demo will show how to use the EXTI interrupt line to control the LED2. When press down the Tamper Key, it will produce an interrupt. In the interrupt service function, the demo will toggle LED2.

#### 5.3.2 DEMO Running Result

Download the program <03\_EXTI\_Key\_Interrupt\_mode> to the EVAL board, Press down the Tamper Key, LED2 will be turned on. Press down the Tamper Key again, LED2 will be turned off.

#### 5.4 USART Printf

#### 5.4.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use GPIO control the LED
- Learn to retarget the C library printf function to the USART

## 5.4.2 DEMO Running Result

Download the program < 04\_USART\_Printf > to the EVAL board, connect serial cable to EVAL\_COM0. This implementation outputs "USART printf example: please press the Tamper key" on the HyperTerminal using EVAL\_COM0. Press the Tamper key, serial port will output "USART printf example".

The output information via the serial port is as following.

USART printf example: please press the Tamper key
USART printf example

#### 5.5 USART\_HyperTerminal\_Interrupt

#### 5.5.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

■ Learn to use the USART transmit and receive interrupts to communicate with the serial terminal tool

#### 5.5.2 **DEMO Running Result**

Download the program < 05\_USART\_HyperTerminal\_Interrupt > to the EVAL board, connect serial cable to EVAL\_COM0. Firstly, all the LEDs are turned on and off for test. Then, the EVAL\_COM0 sends the tx\_buffer array (from 0x00 to 0xFF) to the serial terminal tool supporting hex format communication and waits for receiving data of BUFFER\_SIZE bytes from the serial terminal. The data MCU has received is stored in the rx\_buffer array. After that, compare tx\_buffer with rx\_buffer. If tx\_buffer is same with rx\_buffer, LED2, LED3, LED4, LED5 flash by turns. Otherwise, LED2, LED3, LED4, LED5 toggle together.

The output information via the serial port is as following.

```
00 01 02 03 04 05 06 07 08 09 0A 0B 0C 0D 0E 0F 10 11 12 13 14 15 16 17

#### 5.6 USART Hardware Flow Control

## 5.6.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

■ Learn to use the USART transmit and receive data using hardware flow control

#### 5.6.2 DEMO Running Result

Download the program < 06\_USART\_HardwareFlowControl > to the EVAL board, connect serial cable to EVAL\_COM2. Firstly, all the LEDs are turned on and off for test. Then, the EVAL\_COM2 sends the string "USART Hyperterminal Hardware Flow Control Example: USART - Hyperterminal communication using hardware flow control" to the serial terminal tool which supporting string format communication and opening CTS and RTS function. Then the MCU waits for receiving data from the serial terminal. The data can be any string ended with carriage return. After that, MCU sends the received string back to the serial terminal and prints it.

The output information via the serial port is as following.

USART Hyperterminal Hardware Flow Control Example: USART - Hyperterminal communication using hardware flow control

The words send from the Hyper Terminal

#### 5.7 ADC\_Temperature\_Vrefint

#### 5.7.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use the ADC to convert analog signal to digital data
- Learn to get the value of inner channel 16(temperature sensor channel) and channel 17 (VREFINT channel)

## 5.7.2 **DEMO** Running Result

Download the program <07\_ADC\_Temperature\_Vrefint> to the GD32103B-EVAL board. Connect serial cable to EVAL\_COM0, open the HyperTerminal.

When the program is running, HyperTerminal display the value of temperature and internal voltage reference (VREFINT).

Notice: because there is an offset, when inner temperature sensor is used to detect accurate temperature, an external temperature sensor part should be used to calibrate the offset error.

the temperature data is 50 degrees Celsius the reference voltage data is 1.175V

the temperature data is 50 degrees Celsius the reference voltage data is 1.174V

the temperature data is 50 degrees Celsius the reference voltage data is 1.177V

the temperature data is 50 degrees Celsius the reference voltage data is 1.176V

the temperature data is 50 degrees Celsius the reference voltage data is 1.175V

#### 5.8 ADC0 ADC1 Follow up mode

#### 5.8.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use the ADC to convert analog signal to digital data
- Learn to use ADC0 and ADC1 follow-up mode

#### 5.8.2 **DEMO** Running Result

Download the program <08\_ADC0\_ADC1\_Follow\_up\_mode> to the GD32103B-EVAL board. Connect serial cable to EVAL\_COM0, open the HyperTerminal. PC4 and PC5 pin voltage access by external voltage.

TIMER0\_CH0 is the trigger source of ADC0 and ADC1. When the rising edge of TIMER0\_CH0 coming, ADC0 starts immediately and ADC1 starts after a delay of several ADC clock cycles. The values of ADC0 and ADC1 are transmitted to array adc\_value[0] and adc\_value[1] by DMA.

When the first rising edge of TIMER0\_CH0 coming, the value of the ADC0 conversion of PC4 pin is stored into the low half word of adc\_value[0], and after a delay of several ADC clock cycles the value of the ADC1 conversion of PC5 pin is stored into the high half word of adc\_value[0]. When the second rising edge of TIMER0\_CH0 coming, the value of the ADC0 conversion of PC5 pin is stored into the low half word of adc\_value[1], and after a delay of several ADC clock cycles the value of the ADC1 conversion of PC4 pin is stored into the high half word of adc\_value[1].

When the program is running, HyperTerminal display the regular value of ADC0 and ADC1 by adc\_value[0] and adc\_value[1].

```
the data adc_value[0] is OFDF0681
the data adc_value[1] is O6ACOFE3
the data adc_value[0] is OFDF0681
the data add value[1] is O6ACOFE2
the data adc_value[0] is OFDF06A0
the data adc_value[1] is O6AEOFEO
the data adc_value[0] is OFDF06A0
the data adc_value[1] is O6ACOFE2
the data adc_value[0] is OFDF06A0
the data adc_value[1] is O6ACOFE3
the data adc_value[0] is OFDF06A0
the data adc_value[1] is O6ACOFE2
the data adc_value[0] is 020406A1
the data adc_value[1] is O6ACO37E
the data adc_value[0] is 00AA0681
the data adc_value[1] is O6ACOOE5
the data adc_value[0] is 00000681
the data adc_value[1] is O6ACOOOO
```

#### 5.9 ADC0\_ADC1\_Regular\_Parallel\_mode

#### 5.9.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use the ADC to convert analog signal to digital data
- Learn to use ADC0 and ADC1 regular parallel mode

## 5.9.2 **DEMO** Running Result

Download the program <09\_ADC0\_ADC1\_Regular\_Parallel\_mode> to the GD32103B-EVAL board. Connect serial cable to EVAL\_COM0, open the HyperTerminal. PC4 and PC5 pin connect to external voltage input.

TIMER0\_CH0 is the trigger source of ADC0 and ADC1. When the rising edge of TIMER0\_CH0 coming, ADC0 and ADC1 convert the regular channel group parallelly. The values of ADC0 and ADC1 are transmitted to array adc\_value[0] and adc\_value[1] by DMA.

When the first rising edge of TIMER0\_CH0 coming, the value of the ADC0 conversion of PC4 pin is stored into the low half word of adc\_value[0], the value of the ADC1 conversion of PC5 pin is stored into the high half word of adc\_value[0]. When the second rising edge of TIMER0\_CH0 coming, the value of the ADC0 conversion of PC5 pin is stored into the low half word of adc\_value[1], the value of the ADC1 conversion of PC4 pin is stored into the high half word of adc\_value[1].

When the program is running, HyperTerminal displays the regular value of ADC0 and ADC1

stored in adc\_value[0] and adc\_value[1].

```
the data adc_value[0] is 0000066D
the data adc_value[1] is 06790000
the data adc_value[0] is 0000066D
the data adc_value[1] is 067A0000
the data adc_value[0] is 0000063F
the data adc_value[1] is 064F0000
the data adc_value[0] is 00000627
the data adc_value[1] is 06330000
the data adc_value[0] is 00000626
the data adc_value[1] is 06310000
the data adc_value[0] is 000005FF
the data adc_value[1] is 06100000
the data adc_value[0] is 000005BF
the data adc_value[1] is O5EBO000
the data adc_value[0] is 000005BF
the data adc_value[1] is O5E90000
```

#### 5.10 I2C\_EEPROM

#### 5.10.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use the master transmitting mode of I2C module
- Learn to use the master receiving mode of I2C module
- Learn to read and write the EEPROM with I2C interface

## 5.10.2 DEMO Running Result

Download the program <10\_I2C\_EEPROM> to the EVAL board and run. Connect serial cable to COM0, and open the HyperTerminal to show the print message.

Firstly, the data of 256 bytes will be written to the EEPROM from the address 0x00 and printed by the serial port. Then, reading the EEPROM from address 0x00 for 256 bytes and the result will be printed. Finally, compare the data that were written to the EEPROM and the data that were read from the EEPROM. If they are the same, the serial port will output "I2C-AT24C02 test passed!" and the four LEDs lights flashing, otherwise the serial port will output "Err: data read and write aren't matching." and all the four LEDs light.

The output information via the serial port is as following.

```
I2C-24CO2 configured.
The I2CO is hardware interface
The speed is 400000
AT24C02 writing.
0x00 0x01 0x02 0x03 0x04 0x05 0x06 0x07 0x08 0x09 0x0A 0x0B 0x0C 0x0D 0x0E 0x0F

#### 5.11 SPI\_SPI\_Flash

## 5.11.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

 Learn to use the master mode of SPI unit to read and write NOR Flash with the SPI interface

## 5.11.2 DEMO Running Result

The computer serial port line connected to the COM0 port of development board, set the baud rate of HyperTerminal software to 115200, 8 bits data bit, 1 bit stop bit.

Download the program <11\_SPI\_SPI\_Flash> to the EVAL board, the HyperTerminal software can observe the operation condition and will display the ID of the flash, 256 bytes data which are written to and read from flash. Compare the data that were written to the flash and the data that were read from the flash. If they are the same, the serial port will output "SPI-GD25Q16 Test Passed!", otherwise, the serial port will output "Err: Data Read and Write aren't

Matching.". At last, turn on and off the leds one by one. The following is the experimental results.

```
System is Starting up...
Flash: 128K
The CPV Unique Device ID: [38363452-30313737-140080]
SPI Flash:GD25Q16 configured...
The Flash_ID:0xC84015

SPI-GD25Q16 Test Passed!
```

#### 5.12 EXMC\_SRAM

#### 5.12.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

Learn to use EXMC control the SRAM

#### 5.12.2 DEMO Running Result

GD32103B-EVAL board has EXMC module to control SRAM. Before running the demo, JP10、JP12、JP13、JP14 and JP15 must be fitted to the EXMC port, JP11 must be fitted to the sram port. Download the program <12\_EXMC\_SRAM> to the EVAL board. This demo shows the write and read operation process of SRAM memory by EXMC module. If the test pass, LED2 will be turned on. Otherwise, turn on the LED5. Information via a HyperTerminal output as following:

SRAM test successed! the data is: 1215 1216 1217 1218

#### 5.13 EXMC\_TouchScreen

#### 5.13.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

■ Learn to use EXMC control LCD

## 5.13.2 **DEMO** Running Result

GD32103B-EVAL board has EXMC module to control LCD. Before running the demo, JP10、JP12、JP13、JP14 and JP15 must be fitted to the EXMC port, JP11 must be fitted to the Icd port. Download the program <13\_EXMC\_TouchScreen> to the EVAL board. This demo displays GigaDevice logo and four green buttons on the LCD screen by EXMC module. Users can touch the green button to turn on the corresponding LED on board, and then the color of button you had touched will change to red.

### 5.14 CAN\_Network

## 5.14.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

■ Learn to use the CAN0 communication between two boards

GD32103B-EVAL development board integrates the CAN(Controller Area Network) bus controller, which is a common industrial control bus. CAN bus controller follows the CAN bus protocol of 2.0 A and 2.0 B. This demo mainly shows how to communicate two EVAL boards through CAN0.

## 5.14.2 **DEMO** Running Result

This example is tested with two GD32103B-EVAL boards. Jump the JP14 and JP15 to CAN with the jumper cap. Connect L pin to L pin and H pin to H pin of JP6 on the boards for sending and receiving frames. Download the program <14\_CAN\_Network> to the two EVAL boards, and connect serial cable to COM0. Firstly, the COM0 sends "please press the Tamper key to

transmit data!" to the HyperTerminal. The frames are sent and the transmit data are printed by pressing Tamper Key push button. When the frames are received, the receive data will be printed and the LED2 will toggle one time.

The output information via the serial port is as following.

```
please press the Tamper key to transmit data!

CANO transmit data: ab,cd

CANO receive data: ab,cd
```

#### 5.15 RCU\_Clock\_Out

#### 5.15.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use GPIO control the LED
- Learn to use the clock output function of RCU
- Learn to communicate with PC by USART

#### 5.15.2 DEMO Running Result

Download the program <15\_RCU\_Clock\_Out> to the EVAL board and run. Connect serial cable to EVAL\_COM0, open the HyperTerminal. When the program is running, HyperTerminal will display the initial information. Then user can choose the type of the output clock by pressing the TAMPER button. After pressing, the corresponding LED will be turned on and HyperTerminal will display which mode be selected. The frequency of the output clock can be observed through the oscilloscope by PA8 pin.

Information via a serial port output as following:

```
/======== Gigadevice Clock output Demo =========/
press tamper key to select clock output source
CK_OUTO: system clock
CK_OUTO: IRC8M
CK_OUTO: HXTAL
CK_OUTO: system clock
```

## 5.16 PMU\_sleep\_wakeup

## 5.16.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

Learn to use the USART receive interrupt to wake up the PMU from sleep mode

#### 5.16.2 DEMO Running Result

Download the program < 16\_PMU\_sleep\_wakeup > to the EVAL board, connect serial cable to EVAL\_COM0. After power-on, all the LEDs are off. The MCU will enter sleep mode and the software stop running. When the USART0 receives a byte of data from the HyperTerminal, the MCU will wake up from a receive interrupt. And all the LEDs will flash together.

#### 5.17 RTC\_Calendar

#### 5.17.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use RTC module to implement calendar and alarm function
- Learn to use USART module to implement time display

#### 5.17.2 DEMO Running Result

Download the program <17\_RTC\_Calendar> to the EVAL board and run. Connect serial cable to EVAL\_COM0, open the HyperTerminal. After start-up, the program will ask to set the time on the HyperTerminal. The calendar will be displayed on the HyperTerminal. At the same time, set current time add 10 second as alarm time. After 10 second, the alarm note will be displayed on the HyperTerminal and turn on LEDs.

```

#### 5.18 TIMER\_Breath\_LED

#### 5.18.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use Timer output PWM wave
- Learn to update channel value

#### 5.18.2 **DEMO Running Result**

Use the DuPont line to connect the TIMER0\_CH0 (PA8) and LED2 (PC6), and then download the program <18\_TIMER\_Breath\_LED> to the GD32103B-EVAL board and run. PA8 should not be reused by other peripherals.

When the program is running, you can see LED2 lighting from dark to bright gradually and then gradually darken, ad infinitum, just like breathing as rhythm.

#### 5.19 USBD\_Keyboard

#### 5.19.1 **DEMO\_Purpose**

This demo includes the following functions of GD32 MCU:

- Learn how to use the USBD peripheral mode
- Learn how to implement USB HID(human interface) device

The GD32103B-EVAL board is enumerated as an USB Keyboard, which uses the native PC Host HID driver, as shown below. The USB Keyboard uses three keys to output three characters ('b', 'a' and 'c'). In addition, the demo also supports remote wakeup which is the ability of a USB device to bring a suspended bus back to the active condition, and the 'Tamper' key is used as the remote wakeup source.

#### 5.19.2 DEMO Running Result

Download the program <19\_USBD\_Keyboard> to the EVAL board and run. If you press the Tamper key, will output 'a'. If you press the Wakeup key, will output 'b'. If you press the User key, will output 'c'.

If you want to test USB remote wakeup function, you can do as follows:

- Manually switch PC to standby mode
- Wait for PC to fully enter the standby mode
- Push the User key
- If PC is ON, remote wakeup is OK, else failed.

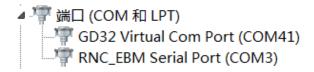

#### 5.20 USBD\_CDC\_ACM

#### 5.20.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn how to use the USBD peripheral
- Learn how to implement USB CDC device

GD32103B-EVAL board has one USBD interface. In this demo, the GD32103B-EVAL board is enumerated as an USB virtual COM port, which was shown in device manager of PC as below. This demo makes the USB device look like a serial port, and loops back the contents of a text file over USB port. To run the demo, input a message using the PC's keyboard. Any data that shows in HyperTerminal is received from the device.

## 5.20.2 DEMO Running Result

Download the program <20\_USBD\_CDC\_ACM> to the EVAL board and run. When you input message through computer keyboard, the HyperTerminal will receive and shown the message. For example, when you input "GigaDevice MCU", the HyperTerminal will get and show it as below.

GigaDevice MCU	_

It is the responsibility of the user of this document to properly design, program, and test the functionality and safety of any application made of this information and any resulting product. Except for customized products which has been expressly identified in the applicable agreement, the Products are designed, developed, and/or manufactured for ordinary business, industrial, personal, and/or household applications only. The Products are not designed, intended, or authorized for use as components in systems designed or intended for the operation of weapons, weapons systems, nuclear installations, atomic energy control instruments, combustion control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, life-support devices or systems, other medical devices or systems (including resuscitation equipment and surgical implants), pollution control or hazardous substances management, or other uses where the failure of the device or Product could cause personal injury, death, property or environmental damage ("Unintended Uses"). Customers shall take any and all actions to ensure using and selling the Products in accordance with the applicable laws and regulations. The Company is not liable, in whole or in part, and customers shall and hereby do release the Company as well as it's suppliers and/or distributors from any claim, damage, or other liability arising from or related to all Unintended Uses of the Products. Customers shall indemnify and hold the Company as well as it's suppliers and/or distributors harmless from and against all claims, costs, damages, and other liabilities, including claims for personal injury or death, arising from or related to any Unintended Uses of the Products.

Information in this document is provided solely in connection with the Products. The Company reserves the right to make changes, corrections, modifications or improvements to this document and Products and services described herein at any time, without notice.
